

National Space Day

National Space Day, celebrated on August 23, is an occasion that fills every Indian with immense pride. This day was officially declared to honour the monumental achievement of the Indian Space Research Organisation (ISRO) and the nation's successful Chandrayaan-3 mission. The historic soft landing on the Moon's surface is not just a scientific accomplishment, but a powerful statement of India's growing technological prowess and its unwavering commitment to space exploration. National Space Day is a tribute to the past, a celebration of the present, and a source of inspiration for the future. We at Vishwa Bharti Public School, Ghaziabad, celebrated this historic occasion with a special assembly. Students emphasized space, scientists, and sustainable efforts to make dreams come true. The zest and zeal of consistent efforts lead to the 'Mission I-am-possible'.

Students shared facts related to space, gave a speech about the journey of ISRO from its establishment to its implementation, and a role-play depicted eminent scientists and their role in making the Indian Space Mission a dream come true."
